Shopping Cart		
Orders		
Admin side		
Create a Product		
Update and Delete a Product		
Update Order Status		
Assignment		

Setup a fresh Expo project

Status: Not started
Assign: Empty
Module: 1. UI

Create a new Expo project

Setting up a new Expo project is as easy as running a single command.

```
npx create-expo-app@latest FoodOrdering -t
```

If you don't have the `create-expo-app` already install, npx will do it for you. Just press `Y` if asked.

For the template, let's choose **"Navigation (TypeScript)"**.

```
❯ cd Projects/Youtube/FoodOrdering
❯ npx create-expo-app@latest FoodOrdering -t
? Choose a template: › - Use arrow-keys. Return to submit.
    Blank
    Blank (TypeScript)
❯   Navigation (TypeScript)
    File-based routing with TypeScript enabled
    Blank (Bare)
```

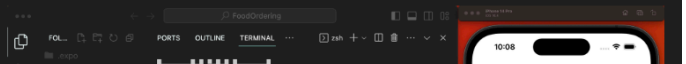

Initialise a new Expo app using npx create-expo-app

After the project is initialised, let's open it up in our code editor.

Open up a terminal, and let's run the development server with `npm start`

The next step is to run our app on a device. The easiest way is to download the Expo Go app (available both on Play Market and App Store), and then scan the QR you see in the terminal. That way, you can continue to develop the app and see the hot updates directly on your device.

Optionally, you can run the app on an iOS Simulator by pressing `i` or on Android Emulator by pressing `a`. But for this, you have to set up the emulators using Xcode or Android Studio.
